EXPERIENCE

My experience in a store and university projects has helped me develop effective communication skills with clients and teams. In university, I tackled technical challenges in projects with tight deadlines. I independently developed a complete system in .Net and served as a teaching assistant, reviewing programming assignments. I anticipate problems and propose innovative solutions, applying agile methodologies like Scrum to enhance team productivity and quality of work.

With over 3 years of experience in software development, algorithms, data structures, and multimedia content management.
